

Release Notes:

QliqCHAT for iOS and Android

Release Date: August 29, 2024

Version 2.1.422(Android)

Version 2.1.422 (iOS)

Welcome to the latest release of QliqCHAT for iOS and Android **Mobile Devices**

Important Notes for Affected Users

- Prior versions of QliqCHAT are no longer available on Google Play Store

What is NOT Affected by this release?

- QliqConnect
- Quincy
- Secure Messaging APIs
- QliqDIRECT

What's New

1. Added away message to users in conversation details view
2. Sharing images, videos, PDFs, TXT, CSV, and XLS files from other apps to QliqCHAT conversations

Improvements

1. Added the possibility to expand long conversation subjects in conversation details
2. Non QliqCHAT users may no longer invite a contact when that user is not associated with a group
3. Archived conversations are now synced for the same user account for different devices and platforms
4. The order of first and last names in the display name can be changed before uploading messages and files to the EMR
5. Added an indicator in Settings to show whether QliqSTOR Archiving is enabled or disabled
6. Chromebook and Android users are now able to upload files from their device file system ([Ticket](#))
7. Implemented a popup for unrestricted battery setting check to ensure timely notifications ([Ticket](#))

Bug Fixes

1. Message status priority is now displayed correctly when statuses are updated at the same time
2. Fixed an issue where the message input field at times would disappear when creating a new conversation
3. Users will see consistent messages statuses when logged in under the same account on different devices
4. Audio files display the actual time that they were recorded
5. Administrators have the option to delete PDF files in the QliqSTOR folder
6. Users now receive escalated calls
7. Users can now play sent/received audio messages in chat multiple times
8. The mute button works consistently when trying to mute a conversation
9. Messages now decrypt as expected
10. Callers now can select the desired phone number when there are multiple phone numbers listed for the recipient
11. Attachments larger than 10 Mb display previews and thumbnails correctly
12. Fixed an issue when a message sent from one device and recalled from another did not appear as recalled for recipients ([Ticket](#))
13. Fixed an issue where Secure messages sent through the API appear as Unknown Sender ([Ticket](#))

14. Fixed the message delay issues for Android users (fixed with back-end deployment, no build update required)([Ticket](#))

Limitations

1. The EMR Upload is not functioning correctly in version 422. Although the EMR uploads appear to be successful in QliqCHAT, they may not record to the EMR as expected.
